ENVIRONMENTAL DATA RELEASED

DERIVED EMISSION REPORTS

Drakewell have worked closely with environmental consultants Aether and engaged Defra's Emission Factor Toolkit to offer emissions reports. Using historical and future traffic data users can monitor and report the environmental impact of vehicles on a highway network without installing additional roadside equipment.

LIVE ENVIRONMENTAL MONITORING

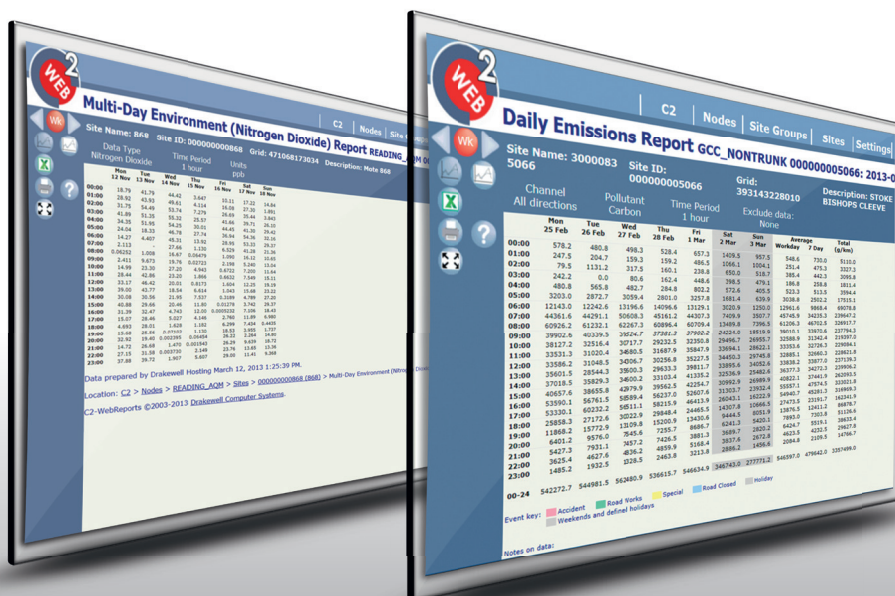

Drakewell's Environment Module can receive live data from monitoring devices alongside vehicle attribute and journey time data. This provides a holistic approach for reporting, monitoring and tackling the environmental impact of traffic on a highway network while ensuring the integrity of the collected information.

BUILD BETTER EMISSION STRATEGIES

C2-Web can push live emissions data to a common database triggering VMS and/or signal timing alterations based upon environmental and/or journey time parameters. Live traffic management decisions and the effect can now be assessed thoroughly in C2-Web for ongoing improvement and building future strategies.

FEATURES:

- > MEASURED OR DERIVED EMISSION VALUES
- > NOISE & HUMIDITY ANALYSIS
- > TEMPERATURE ANALYSIS
